

Pro Peel 50
Lactic 50% 2.3pH
For: Dry, Normal and Sensitive, aging
skin types.

Direction Sheet

INDICATIONS: This is a wonderful peel for those dealing with aging and pigmented skin. Lactic Acid will exfoliate the outer surface of the skin and encourage new cell turnover. It is a natural humectant, pulling moisture from the collagen levels to the surface of skin. It is an excellent acid choice for dry and sun damaged skin. This treatment is relatively non-irritating with very little, if any, down time. Our Lactic acid peel has been enhanced with a "skin lightening" and anti-aging cocktail of herbal remedies.

USAGE: Series of six- eight treatments will give the most beneficial results.

PRE-TREATMENT: To exfoliate and flatten the stratum corneum, pre-treatment is truly important. For a minimum of two weeks, begin and end each day by washing with a pH acidic cleanser. If you have pigmented skin, or are a darker Fitzgerald skin type, apply a tyrosine inhibitor such as our Fade Bright serum, immediately after cleansing. Apply an anti-oxidant such as High Octane Vitamin C, and an SPF 30+ cream each day. In the evening apply Retinol (.10, .20 or .30), RetinA™ or a Glycolic Serum to gently prime the skin for the peel solution.

POST PEEL: Lactic is a low-irritation acid and post care will be minimal. Keep your skin moisturized with a quality, healing product. We recommend Emu oil or a mixture of Emu oil and Pure Hyaluronic Acid. **Mixing 1 pump of Regenerate EGF (epidermal growth factor) into your healing product will boost your epidermal regeneration after the peel.

PRECAUTIONS:

- ✓ Do not apply Lactic Acid if you have an allergy to DAIRY products.
- ✓ Check with your doctor before use if you are pregnant.
- ✓ Never apply another transdermal product during a chemical peel (No Emu oil until neutralization is complete!)
- ✓ Never use a chemical peel if you have been/are-using accutane in the past 6 months.
- ✓ Never apply a peel after another facial exfoliating product (scrubs of any type).
- ✓ Stop using *Retin-a* at least 2 days before performing a peel.
- ✓ Keep the Peel Solution at least a quarter of an inch away from the eyes and mucus membranes.
- ✓ If severe skin irritation occurs, remove the product by rinsing with cool water and consult a physician.
- ✓ Do not apply to irritated, sensitive skin or skin with open wounds or after extraction.
- ✓ Do not expose your face to the sun for 24 hours before or after the application of the chemical Peel. Then use a minimum SPF 30 on a daily basis.
- ✓ Do not apply the Peel to skin that has been waxed or shaved within 24 Hours.
- ✓ Slight reddening of the skin may occur for a limited period of time especially with sensitive skin types.

USAGE: Lactic is a mild acid and can be applied 1-2X per week to keep skin moist and exfoliated.

Usage	Times
Application 1	1-5 minutes
Application 2	1-10 minutes
Additional applications	Time may be increased as desired.

STEP BY STEP INSTRUCTIONS:

- ✓ Follow PRE-TREATMENT for 2 weeks for best results. Dark and pigmented types use FB serum.
- ✓ Apply your TEST patch at least 24 hours prior to peel to check for allergies or excessive irritation.
- ✓
- ✓ Cleanse the skin with a deep cleanser.
- ✓ Apply layer of Prep A (or highest percentage alcohol) and let air dry.

- ✓ Pour a small amount of peel solution into medicine cup.
- ✓ Fold a gauze pad in half and dip into solution, saturating pad.
- ✓ Fold gauze in half again and give one GOOD squeeze to remove excess solution.
- ✓ Get a timer and set it for desired peel time. (See chart above).
- ✓ Apply peel in a HORIZONTAL motion across the entire face/neck.
- ✓ Apply peel again, this time in a VERTICAL motion across the entire face/neck. *This is to ensure the best coverage possible. (The cheek, lip and nose areas are the most sensitive, so they should be done last to avoid excess irritation— Avoid eye and mucus membrane areas). *Your skin should not be dripping wet! Just wipe it on like you would any toner. *A stinging/itching sensation is normal when using the Peel Solution, but a very mild sensation to no sensation at all is also acceptable as individual tolerances differ. Erythema is very uncommon with Peel 22. Watch for any redness and neutralize acid with a dab of water if necessary.
- ✓ When time has ended apply Neutralizer and/or rinse with cool water.
- ✓ Pat skin dry and follow with a plain moisturizer, Hyaluronic 100 or Emu oil are excellent choices. (Now is not the time for any active ingredients a.k.a. glycolic, retinol etc..)
- ✓ *Make sure that you use a sunscreen with an SPF of at least 30. (Because this product may make your skin more sensitive to the sun, be certain you have adequate sunscreen protection while using this product and for a week afterwards). *per FDA

F.A.Q's:

I think the solution I purchased was too strong for me. How can I lessen the %? You can lessen the percentage by mixing in either pure aloe gel or purified water (in a separate container) by following the formula 2/3 Peel solution 1/3 Water.

I think the solution I purchased was too weak for me. What can I do? If you have reached your maximum time, and you still feel you need more, don't waste your solution. *You can apply the solution in layers to keep it active. Apply solution, wait 2 minutes and reapply again. This will drop the pH level back down so you can leave it on for longer! You may apply again if needed.

I do not see peeling, is it still working? Just because you do not see any visible flaking does not mean the peel isn't working. The acid's job is to dissolve the bond that holds the outermost layers of dead skin to the face. Most of the loosened skin comes off during your daily cleansings. If your skin "feels" smoother, it is working.

I have Rosacea. Can I still use this peel? You may want to try mandelic instead, but lactic is ok for some individuals.

Approximately how many peels will I get from my bottle? 1/4oz. = 3 peels, 1oz. = 20 peels, 2oz. = 40 peels, 4oz. = 80 peels (average 20 drops per peel).

If you have any medical questions as to whether you should be performing these peels...Consult your physician or dermatologist before you proceed!
